

FLASH_Exported_Functions

FLASH_Exported_Functions_Group1

```
graph LR; A[FLASH_Exported_Functions_Group1] --> B[FLASH_Exported_Functions]
```

The diagram illustrates a pointer relationship between two memory sections. A gray box on the right, labeled 'FLASH_Exported_Functions_Group1', has an arrow pointing to a white box on the left, labeled 'FLASH_Exported_Functions'. This indicates that the group of functions is stored in the first memory location and points to the specific function definitions in the second memory location.
